## AIR-COOLED CONDENSING UNITS

The first air conditioner was designed in 1902 by Willis Carrier in order to maintain a consistent humidity in a printing plant. Carrier quickly realized the technology could be used to create comfortable working environments, and marketed the machine as the air conditioner we know today. The modern air conditioner has since become an essential component of modern culture, so essential in fact, they dominate the once open space around many historical buildings. Can you count how many air conditioning units Leasure Hall boasts?

## LEASURE HALL.

Leasure hall, named in honor of Dr. E.E. Leasure, former dean of the College of Veterinary Medicine, was completed in 1908 or \$71,000. Once the home of the college of Veterinary Medicine, the building's narrow plan in the North/South axis encouraged cross ventilation to keep the dirt-floor surgery rooms that once occupied the bottom floors cool. The building has since been incrementally retrofitted with air conditioning units, over the course of nearly 40 years. As a result, Leasure Hall has obtained one of the most comprehensive collections of air cooled condensing units on the Kansas State campus.

*Leasure Hall's original natural ventilation.*
